

ABSTRACT OF THE DISCLOSURE

METALLIZED FILM AND DECORATIVE ARTICLES

MADE THEREWITH

5

10 A metallized film comprises an opaque, continuous  
layer of metal on an aliphatic polyurethane substrate.  
The polyurethane substrate displays a glass transition  
temperature of about 25° to 110°C and a melting  
temperature greater than or equal to 200°C. Decorative  
articles can be made with the metallized film.
